Sprendlingen fire brigade  
PRO with flexible helmet holder and code lock

## When every second counts, details make all the difference

Many years of experience and dedication to detail have led to the development of fire brigade lockers that meet the high demands of everyday life for emergency services.

Our team will be happy to advise you on your ideas and requirements, including in person on site. We support you in all phases of the realisation of your project. You don't need to worry about anything until your new functional equipment has been set up, aligned and handed over.

*„As a former firefighter, I know what is important in an emergency. This knowledge flows into the design of our lockers and characterises the individual advice we give our customers.“*

**André Trautner, Managing Director**

10 years member of the volunteer fire brigade and founder of the initiative „Nobody comes. Fire brigades in distress.“

DAVIS with combination lock and galvanised boot grate

## LENZKIRCH FIRE BRIGADE

Reference project

» *„Our individual wishes were realised 1:1. The new lockers not only look great, but also allow us to separate our clothes.“*

Jürgen Lindner, Commander of the Lenzkirch Fire Brigade

### DAVIS with boot grate

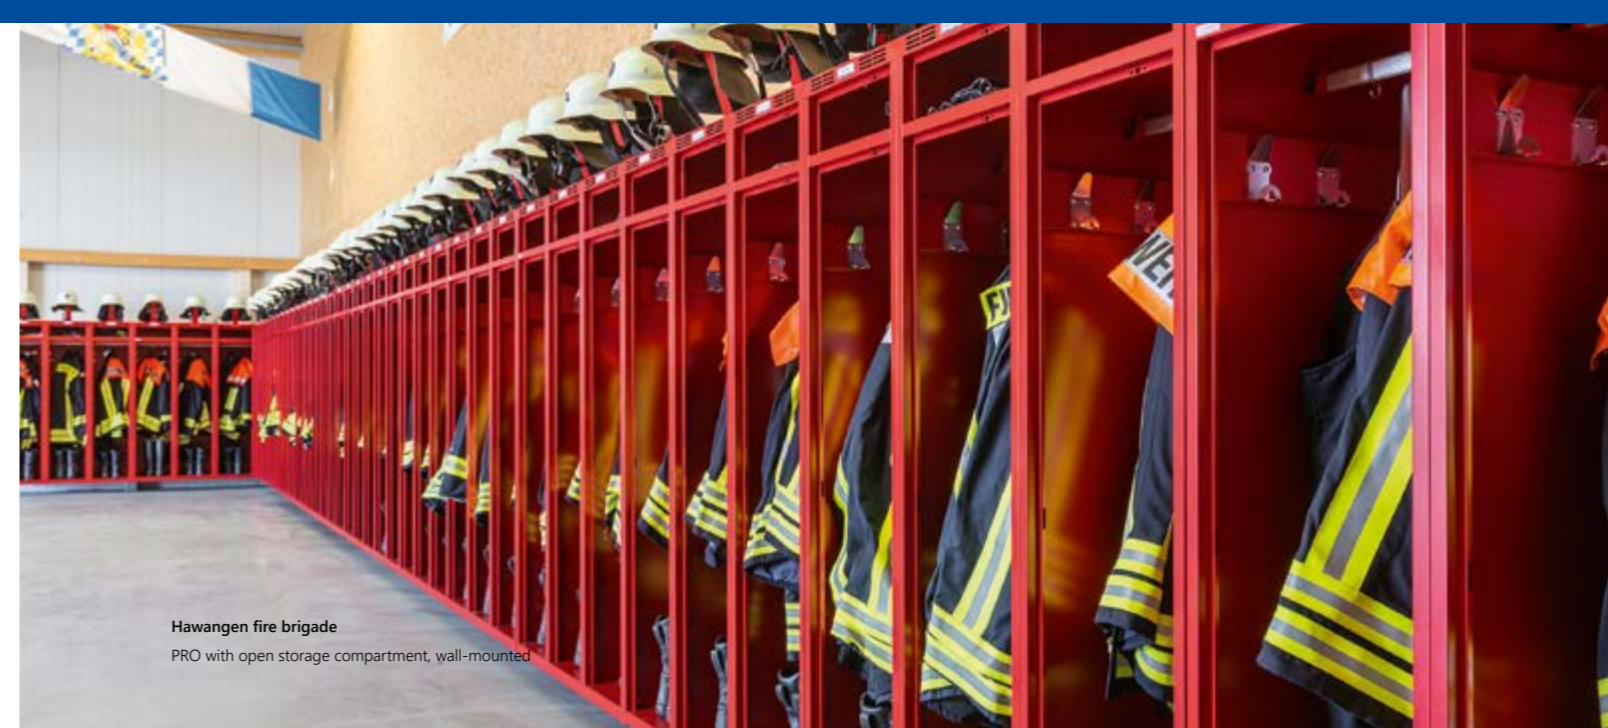

The separate storage of contaminated turnout gear and private items should be standard practice in fire stations. In order to fulfil this directive, separate storage facilities must be available as a minimum.

At the Lenzkirch fire brigade, this is made possible by the DAVIS firefighter locker. The emergency equipment is optimally ventilated in an open compartment and is always ready to hand. Personal clothing is stored separately in its own compartment. Personal items can be stowed quickly and conveniently in the upper valuables compartment. It can be secured using the manual combination lock without a key. The shoe rack allows the warm air from the underfloor heating to pass through, allowing shoes and clothing to dry more quickly.

*Ergonomic helmet holder ensures good ventilation of the helmet*

Hawangen fire brigade  
PRO with open storage compartment, wall-mounted

## FIRE BRIGADE LOCKER PRO

functional and robust

- **Aluminium clothes rail made from oval profile**  
three twist and tilt-proof metal hooks
- **Material hooks attached to the side**  
individually adjustable position
- **Prepared for wall mounting**  
simple installation and alignment
- **Perforated base plate**  
ensures that moisture drips off

### Safe deposit box

The open storage compartment can optionally be replaced by a lockable valuables compartment. The door of the valuables compartment has a slot for letters and documents. Integrated rubber buffers allow the door to close silently.

### Helmet holder

The firefighter locker is equipped with the ergonomic helmet holder as standard. Alternatively, the flexible helmet holder can also be fitted. Thanks to the round shape, the helmet is stored gently, as if on the head. Good ventilation is guaranteed.

### Flexible helmet holder

The fire brigade locker can be fitted with the flexible helmet holder. More on page [26](#)

### Locking systems

The safe deposit box can be fitted with various locks on request. More on page [30](#)

Compartment width 40 cm	180 x 40 x 50	180 x 80 x 50	180 x 120 x 50
Compartment width 50 cm	180 x 50 x 50	180 x 100 x 50	

Mengkofen fire brigade  
Lockable valuables compartment with rotary bolt

## FIRE BRIGADE LOCKER COMFORT

practical and comfortable

- **Lockable valuables compartment with slot**  
optionally as an open storage compartment
- **Open compartment for emergency equipment**  
ready to hand and professionally stored
- **Helmet compartment with perforated base**  
enables the helmet to dry quickly
- **Prepared for wall mounting**  
simple installation and alignment

### Helmet compartment

The firefighter locker allows the helmet to be stored inside the locker. The neck protection is stored correctly and without kinks thanks to the recess at the back of the helmet compartment. The recessed shelf also makes it easier to store large helmets. Ventilation holes contribute to quick drying.

### Metal hook

There are two robust material hooks on the side of the compartment. The position can be individually adjusted and additional hooks can be retrofitted. The oval profile clothes rail is fitted with metal hooks. These are both twist-proof and tilt-proof.

### Colour of carcass and doors

Can be painted in many RAL colours. Light grey, fire red and gentian blue are included in the price.

### Locking systems

The safe deposit box can be fitted with various locks on request. More on page [30](#)

*Helmet off effortlessly

Fire brigade Tholey, Bergweiler-Sotzweiler  
PROFI with flexible helmet holder

## FIRE BRIGADE LOCKER PROFI

spacious compartments, clever details

- **Aluminium clothes rail made from oval profile**  
three twist and tilt-proof metal hooks
- **Material hooks attached to the side**  
individually adjustable position
- **Extra large compartments**  
offer plenty of storage space for equipment
- **Perforated base plate**  
ensures that moisture drips off

### Safe deposit box

The valuables compartment with throw-in opening allows valuables to be stowed away quickly when the door is closed. The rubberised floor covering cushions the impact and prevents scratches. The optional combination lock makes it easy to open even without a key. For security reasons, the open door does not protrude beyond the locker housing.

### Helmet compartment

The helmet is professionally stored in the spacious helmet compartment. Either the ergonomic or the flexible helmet holder can be used. Alternatively, the free storage space can be used for equipment or particularly large safety helmets. In this case, the helmet holder can also be mounted on the top of the locker.

#### Flexible helmet holder

The fire brigade locker can be fitted with the flexible helmet holder. More on page [26](#)

#### Locking systems

The safe deposit box can be fitted with various locks on request. More on page [30](#)

## FIRE BRIGADE LOCKER DAVIS & DAVIS PLUS

### black and white separation

- **Aluminium clothes rail made from oval profile**  
three twist and tilt-proof metal hooks
- **Material hooks attached to the side**  
individually adjustable position
- **Door with insert in private compartment**  
for personal documents and letters
- **Prepared for wall mounting**  
simple installation and alignment

#### Private compartment

Protective equipment and personal clothing are stored separately in the DAVIS / DAVIS Plus. The DAVIS has a lockable valuables compartment and an open clothes compartment for private items. In the DAVIS Plus, the entire private compartment is protected by a lockable door.

#### Helmet compartment

The recess in the shelf of the helmet compartment ensures kink-free storage of the neck protection. The recessed shelf also makes it easier to stow large helmets. Ventilation holes contribute to quick drying.

#### Colour of carcass and doors

Can be painted in many RAL colours. Light grey, fire red and gentian blue are included in the price.

#### Locking systems

The safe deposit box can be fitted with various locks on request. More on page [30](#)

*Shelf and clothes rail also in the compartment*

Compartment width 40 + 20 cm	192 x 60 x 50
Compartment width 40 + 30 cm	192 x 70 x 50
Compartment width 40 + 35 cm	192 x 75 x 50
Compartment width 40 + 40 cm	192 x 80 x 50
Compartment width 50 + 20 cm	192 x 70 x 50
Compartment width 50 + 30 cm	192 x 80 x 50

Optional wardrobe compartments  
with shelves or  
clothes rail

Uetze fire brigade DUO  
with galvanised boot grate

## FIRE BRIGADE LOCKER DUO

black and white separation in a double pack

- **Aluminium clothes rail made from oval profile**  
three twist and tilt-proof metal hooks
- **Material hooks attached to the side**  
individually adjustable position
- **Wardrobe compartments with slot**  
for personal documents and letters
- **Perforated base plate**  
ensures that moisture drips off

### Space-saving black and white separation

The two comfortable compartments for protective clothing are equipped with sufficient space for the complete PPE. The helmet compartment with perforated base and recess for the neck leather offers optimum conditions for professional helmet storage. Flexible metal and plastic hooks and an anti-twist clothes rail allow clothing and accessories to be stored properly. The perforated locker floor ensures that boots dry quickly.

The wardrobe compartments are optionally available with two shelves or a clothes rail with three metal hooks. Thanks to the spatial separation from the PPE compartments, a black and white separation that complies with the guidelines and is particularly space-saving is provided.

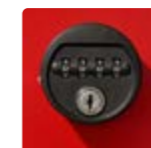

Dimensions HxWxD in cm

Compartment width 40 + 20 + 40 cm	192 x 100 x 50
Compartment width 40 + 30 + 40 cm	192 x 110 x 50
Compartment width 40 + 40 + 40 cm	192 x 120 x 50

#### Colour of carcass and doors

Can be painted in many RAL colours. Light grey, fire red and gentian blue are included in the price.

*Locker compartments with parcel shelf and clothes rail*

## FIRE BRIGADE CLOAKROOM FLEX

space-saving and flexible

- **Black-white separation**  
private items are separated from the operational clothing
- **Optional: door with slot**  
for personal documents and letters
- **Boot rack made of galvanised grating**  
ensures that moisture drips off
- **Hook rail with ergonomic helmet holders**  
professional storage of helmets

### Clothes separation in a small space

As a solution for limited storage space, the FLEX offers a perfect combination of lockable private compartments, hook rail with helmet holders and open boot rack. This ensures that equipment is optimally ventilated and stored within easy reach. The lockers provide secure storage for personal items.

### For 2 or 4 people

The version for two people consists of two lockers and a hook rail with two helmet holders. Each compartment has a hat compartment and a clothes rail. In the extended version, the hook rail has four helmet holders and connects two compartments arranged one above the other. Each locker compartment is equipped with a clothes rail.

### Colour of carcass and doors

Can be painted in many RAL colours. Light grey, fire red and gentian blue are included in the price.

### Locking systems

The safe deposit box can be fitted with various locks on request. More on page [30](#)

Dimensions HxWxD in cm

200 x 106 x 60

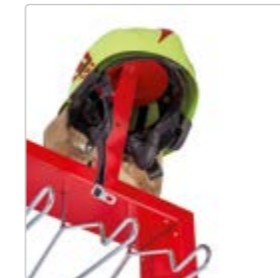

Bremen fire brigade  
VELO with two opposing helmet holders  
and without centre frame rail

## MOBILE FIRE BRIGADE CLOAKROOM VELO

for flexible storage of PPE

- **Ergonomic helmet holder**  
for optimum storage of the helmet
- **Sturdy shoe rack made of galvanised steel**  
for quick drying of the boots
- **Robust stainless steel clothes hanger**  
ideal for heavy duty clothing
- **Swivel castors with parking brake**  
for safe manoeuvring even when loaded

### Frame construction

The robust square frame construction has a high-quality finish and is designed for maximum loads. In addition to six stainless steel coat hangers, further hooks are available on the centre frame rail. The mobile fire brigade cloakroom thus offers space for the complete PPE of three firefighters.

### Black-white separation

The VELO mobile fire brigade cloakroom helps you to separate black and white in your fire brigade changing room. Potentially contaminated protective equipment can be stored separately from everyday clothing and is still quickly available again.

### Colour of carcass and doors

Can be painted in many RAL colours. Light grey, fire red and gentian blue are included in the price.

Youth fire brigade Allmersbach  
JUNIOR mounted on the wall

## YOUTH LOCKER JUNIOR

for the little ones like a big one

- **Aluminium clothes rail made from oval profile**  
three twist and tilt-proof metal hooks
- **Label frame**  
for name badges, embedded in the body
- **Prepared for wall mounting**  
simple installation and alignment
- **Ventilation slots in the body**  
for good air circulation in the helmet compartment

### Safe deposit box

The JUNIOR allows emergency clothing to be stored within easy reach and at children's eye level. In addition to the helmet, there is room for other accessories in the spacious upper shelf. A lockable door turns it into a safe deposit box. A helmet holder can optionally be attached to the locker.

### Stability

The little one is in no way inferior to the big ones: The well-known LOCKEEL® quality with increased material thickness and hard-wearing metal hooks is also continued in the JUNIOR. The robust aluminium clothes rail is equipped with twist and tilt-proof clothes hooks.

**Spannende Farben für Korpus und Türen**  
Es sind viele RAL-Farben möglich. Lichtgrau, Feuerrot, Lichtblau & Reinorange sind im Preis enthalten.

**Locking systems**

*In the colours of the fire brigade and many more exciting variants available.*

Dimensions HxWxD in cm

Compartment width 30 cm    160 x 30 x 50    160 x 60 x 50    160 x 90 x 50

*Curved shelves provide optimum support for hoses*

Variant	Standard shelving	Add-on rack	Hose trolley
	200 x 106 x 53,5	200 x 101 x 53,5	160 x 106 x 53,5
	250 x 106 x 53,5	250 x 101 x 53,5	

## HOSE RACK

for the proper storage of fire hoses

- **Extremely resilient**  
up to 100 kg load capacity per level
- **Drainage channel on every level**  
ideal for draining residual water
- **Kink-free storage**  
for optimum storage
- **Height-adjustable levels**  
for flexible adjustment at 25 mm intervals

### Modular system for individual requirements

The hose rack is a flexible special rack designed for storing fire hoses. It is made of durable galvanised sheet steel and can be loaded with up to 100 kg per level (with even distribution).

The individual shelves are bent slightly upwards at the sides, creating a curve that provides optimum support for the hoses. The hose rack also has a drainage channel that allows any residual water to drain away.

The tube shelf can be customised. The levels are height-adjustable at intervals of 25 mm. It is available in two different heights and can be extended as required using an add-on module. A mobile version with lockable swivel and fixed castors is also available.

# FLEXIBLE HELMET HOLDER

save valuable time when moving out

With the flexible helmet holder, the helmet can be easily and quickly grabbed in seconds. This saves valuable time, as there is no need to lift it down from the firefighter's locker.

To prevent damage to the internal helmet net, our helmet holders are modelled on the shape of the human head. This ensures that the helmet rests fully on the helmet holder and guarantees an even load on the net.

A space is created between the helmet holder and the helmet shell. This design allows the helmet shell to be ventilated and makes it easier for the helmet to dry.

- **Lightning-fast helmet removal**  
with just one hand movement
- **No snagging**  
of belts and straps
- **No jamming**  
can be operated with just one hand on the helmet
- **Gentle storage, ergonomic shape**  
the helmet lies as if on the head

## A UNIQUE PRODUCT: The flexible helmet holder from LOCKEEL®.

This flexible helmet holder, which is height-adjustable and foldable and made of solid steel, is only available from us and our partners. It is painted in the selected body colour.

## WELL-THOUGHT-OUT DETAILS

### Clothes rail

Thanks to the oval profile, the three metal coat hooks can be moved, but are also resistant to twisting and tipping.

### Wall mounting

Fastening with load-distributing rails makes it much easier to assemble and align the enclosures.

Personal protective equipment is much heavier than private everyday clothing. That is why all coat hooks intended for PPE are not made of plastic, but exclusively of high-quality, durable metal.

### Material hook

The interior of the fire service lockers is equipped with two robust metal material hooks. Their position can be flexibly adjusted horizontally. If required, the lockers can be easily upgraded with additional hooks.

### Variable hooks

Additional hooks can be attached to the sides for quicker storage of personal clothing. The locker can be fitted with up to four additional hooks, the position of which can be individually adjusted.

### Height-adjustable feet

Height-adjustable legs made of square tubing make it easy to level out uneven floors and ensure a secure footing. PRO, PROFI, COMFORT and DAVIS are equipped with them already included.

They can be retrofitted for FLEX and JUNIOR.

### Wall mounting

The fire service lockers are prepared for wall mounting as standard. The sophisticated profile system enables safe and easy installation on the wall. This also makes it much easier to align several lockers and creates a uniform overall appearance.

Wall mounting is particularly recommended if the floor is uneven. Another advantage is that it makes it easier to clean the room. Important: The required load-bearing capacity of the wall must be guaranteed even when the lockers are fully loaded!

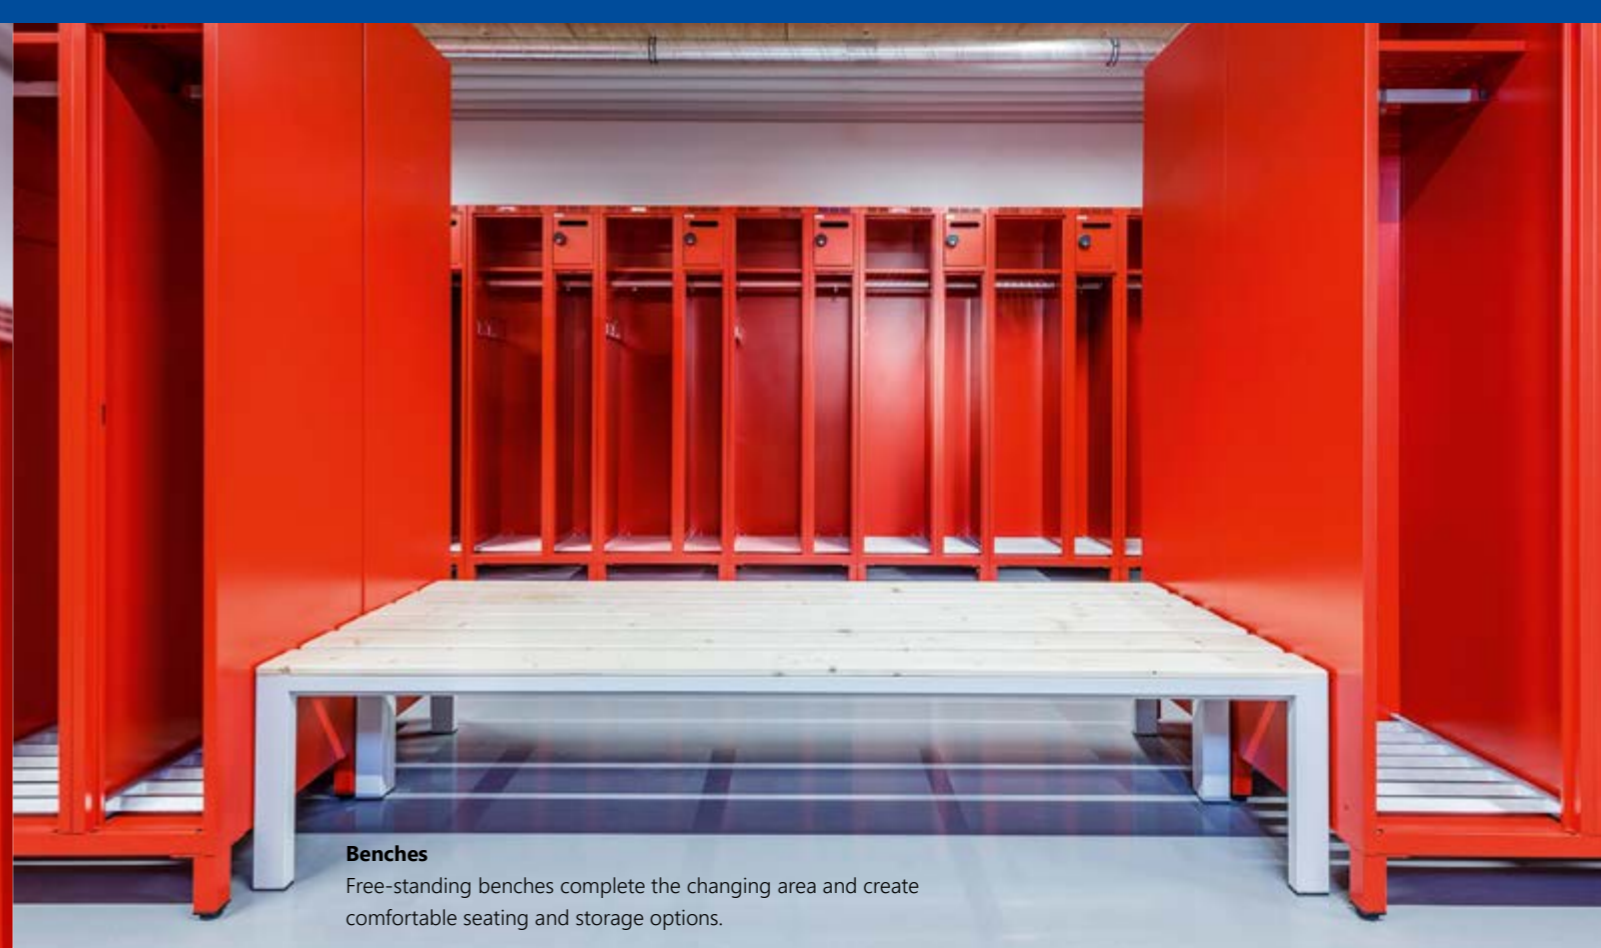

### Galvanisation

All our steel lockers can be fully galvanised on request. In addition to the high-quality paint finish, this further strengthens the protection against increased moisture.

# LOCKING SYSTEMS & ACCESSORIES

## Benches

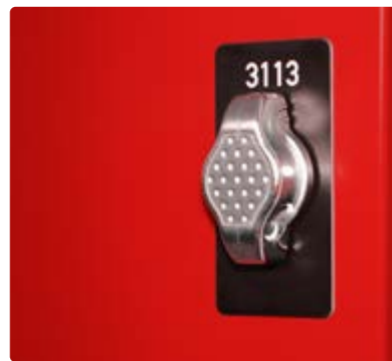

Free-standing benches complete the changing area and create comfortable seating and storage options.

LOCKEEL® fire service lockers are fitted with a cylinder lock or rotary bolt as standard. In principle, all typical market locking systems are possible. We recommend the following products for use by rescue services.

## Cylinder lock

The cylinder lock is widely used and is one of the familiar standard locks. It is already included in the price of your new functional unit. Two keys are also included for each lock. Optionally, you can obtain a master key to open all locks.

## Twist lock

The rotary bolt allows the doors to be locked using a padlock. Each user can fit and use their own individual lock. This means that it is up to each user to decide whether they prefer a combination lock or a key lock. The rotary bolt is already included in the price of our products.

## Mechanical code lock

The mechanical code lock allows each user to set their own combination of numbers. Thanks to the blurring function, the dials automatically return to the home position when the lock is opened. The entire lock body serves as a robust turning knob. The separately available master key helps with forgotten PINs.

## Benches

As seating or additional storage, benches offer a noticeable increase in comfort when changing. If required, they can also be fitted with a hook rail. The seat surface can be made of clear lacquered wooden slats or plastic-coated panels.

## Shoe racks

Plastic shoe trays ensure cleanliness and are easy to clean. They protect the surfaces of the locker from dirt and moisture. The galvanised boot grids help the boots to dry quickly. They are particularly robust and easy to clean. The shoe trays and boot grids are available for different compartment widths.

## Steel bracket

We recommend our heavy-duty stainless steel clothes hangers for tidy storage of heavy emergency clothing. The solid LOCKEEL® hanger fits perfectly in all fire service lockers.

# WORKSHOP EQUIPMENT FOR EMERGENCY SERVICES

**Repair and storage**  
The workshop equipment from LOCKEEL offers clever solutions for storing and maintaining equipment

## Workbenches

Our robust workbenches create the ideal conditions for a tidy and organised workplace. Thanks to fully extendable drawers and modular extension options, materials and tools are always to hand. With load capacities of up to 1000 kg, the workbenches are suitable for a wide range of repair and maintenance work.

## Drawer cabinets

The drawer cabinets are made of high-quality sheet steel and ensure well organised storage. The drawers can be fully extended and offer a load capacity of 50 to 100 kg. Different drawer sizes and optional inserts make the cabinets the ideal storage space for a wide range of tools and materials.

## Mobile workshop equipment

With mobile workshop equipment, the right tools are always to hand, wherever you are. Whether workshop trolleys, mobile workbenches, mobile drawer cabinets or equipment and transport trolleys, our high-quality range ensures maximum flexibility and efficient work processes in every fire service workshop.

## Material cabinets

The equipment lockers offer generous storage space for clothing, equipment and tools. Thanks to the wide range of variants, the right product is available for every purpose, from simple hinged door lockers to certified safety lockers.
